

# Information Guide

## Determining Pulley Face Width

To select the proper pulley face width, the belt width size is necessary. Two rules apply:

- Up to and including 42 inch belt width, 2 inches should be added to the face dimension. For example, the pulley width for a 24 inch wide belt should be 26 inches.
- Above 42 inches, 3 inches should be added. The pulley width for a 48 inch wide belt should be 51 inches.

## Procedure for Ordering Pulleys

Dimensions must be given as follows:

- Diameter of pulley
- Face width of pulley
- Shaft size
- Keyway size

## Pulley Identification
